

Pankaj Kumawat

Senior Mobile Developer (Android/ React Native)

+91-8058382466 | pank.kmwt@gmail.com | [LinkedIn](#) | [GitHub](#) | [Stackoverflow](#) | Bangalore

PROFESSIONAL SUMMARY

Senior Android Developer with over 10 years of experience building scalable consumer mobile applications across health-tech and fintech domains. Contributed to HealthifyMe's Android app surpassing 10M+ downloads and FundsIndia's investment platform, leveraging Kotlin, Jetpack Compose, and MVVM to deliver high-performance, real-time mobile experiences. Used Claude Code, Cursor, and GitHub Copilot in day-to-day Android engineering. Most recently spent 5 months shipping on-device features: ML Kit object scanning and Gemini Nano through AICore, with the interface built in Jetpack Compose.

CORE SKILLS

Programming Languages: Kotlin, Java

On-device AI : ML Kit object scanning, Gemini Nano, AICore

AI Coding tool: Claude Code, Cursor, GitHub Copilot

Android: Android SDK, Jetpack Compose, MVVM, LiveData, StateFlow, Coroutines

Networking: REST APIs, WebSockets, JSON

Tools & Utilities: Git, Bitbucket, Jira, Jenkins, Retrofit, Volley, Firebase App Distribution, Play Console

Testing: Unit Testing, Android Testing Framework, UI Automation, Wiremock

PROFESSIONAL EXPERIENCE

Senior Mobile Engineer (Android/React Native)

Feb 2020 - Aug 2026

Sequoia Consulting Group

Bangalore

- Built scalable Android applications using Kotlin, Coroutines, and MVVM architecture, ensuring clean separation of concerns and long-term maintainability.
- Improved Google Play app rating from 3.9 to 4.2 (~8%) by tightening release quality, reducing crashes and ANRs, and iterating on user-facing stability.
- Reduced app startup time from 4 seconds to 1 second (75%) through cold-start optimization and deferred initialization.
- Integrated an offline-first architecture with local persistence and background sync, enabling uninterrupted workflows in low-connectivity environments.
- Engineered employee profile and leave-management screens using Jetpack Compose and MVVM, leveraging StateFlow for reactive UI state and REST API integration.
- Designed modular architecture to improve code maintainability and accelerate development velocity across the engineering team.
- Automated APK/AAB builds via Jenkins CI/CD with scheduled daily UI automation test runs to monitor pipeline health and catch regressions early.
- Integrated Firebase App Distribution and Play Console internal testing to streamline QA build delivery and accelerate release cycles.
- Established real-time data synchronization and backend API integrations to maintain consistent, up-to-date application state.
- Collaborated with cross-functional teams in Agile environments, coordinating tasks and tracking progress using Jira and Git.

Technologies Used: Kotlin, Coroutines, MVVM, Jetpack Compose, StateFlow, REST APIs, Jenkins, Firebase App Distribution, Play Console, Jira, Git

Senior Android Developer

Aug 2018 - Feb 2020

FundsIndia

Bangalore

- Developed fintech Android features using Kotlin, MVVM, and LiveData, delivering a robust and reactive user experience for investment workflows.
- Integrated real-time stock market data streaming via WebSockets to support live investment tracking and portfolio updates.
- Enhanced app performance and stability through optimized networking strategies and proper Android lifecycle management, reducing crash rate by 11%.

Technologies Used: Kotlin, MVVM, LiveData, WebSockets

Android Developer

May 2016 - Aug 2018

HealthifyMe

Bangalore

- Contributed to a top-rated health and fitness Android application with over 10M+ downloads on the Google Play Store.
- Built features using RxJava, Android SDK, and Material Design components to deliver a polished and responsive user interface.
- Implemented push notifications, data synchronization, and REST API integrations to enhance user engagement and data consistency.

Technologies Used: RxJava, Android SDK, Material Design

Web Developer

Nov 2014 - May 2016

GKMIT

Udaipur

- Worked on php based web development and little bit of android development

Technologies Used: PHP, java

EDUCATION

MCA | 7.17 CGPA
Mohanlal Sukhadia University

BCA
Mohanlal Sukhadia University

SELECTED APPLICATIONS

HealthifyMe – Health & Fitness App (10M+ Downloads)

- Engineered core Android features for a health & fitness app with 10M+ downloads, leveraging Kotlin and Java for high-performance native development.
- Integrated device sensors, GPS tracking, and third-party health SDKs to deliver real-time fitness monitoring and personalized wellness insights.
- Optimized app performance and reduced load times through efficient data caching, background sync, and an offline-first architecture.
- Coordinated Google Play Store deployment, ensuring compliance with store guidelines and maintaining high user ratings at scale.

FundsIndia – Investment Platform (1M+ Downloads)

- Built and maintained Android modules for an investment platform with 1M+ downloads, enabling seamless mutual fund and portfolio management.
- Integrated secure REST APIs and third-party payment SDKs to facilitate real-time transactions and investment tracking.
- Implemented push notifications for market alerts and portfolio updates, improving user engagement and retention.
- Strengthened data security and compliance by incorporating encryption and secure authentication flows within the Android application.

Sequoia – People Management (100k+ Downloads)

- Developed Android features for a people management platform with 100K+ downloads, streamlining HR workflows and employee data access.
- Built offline-first support and local data sync capabilities, ensuring uninterrupted access to HR records in low-connectivity environments.
- Integrated RESTful APIs and role-based access controls to deliver secure, personalized dashboards for managers and employees.
- Contributed to Play Store releases, coordinating versioning, release notes, and staged rollouts for a stable user experience.

ResHotel – Hotel Management Application

- Designed and developed an Android-based hotel management application to streamline reservations, check-ins, and room inventory tracking.
- Integrated RESTful APIs and real-time data sync to keep front-desk and back-office operations aligned across devices.
- Implemented push notifications for booking confirmations and guest alerts, enhancing operational responsiveness.
- Delivered a responsive, intuitive UI using native Android components, improving staff efficiency and reducing manual errors.

Helping Homes Services – Home Services Platform

- Built an Android home services platform connecting customers with service providers for on-demand bookings and scheduling.
- Integrated GPS and location APIs to enable real-time service provider tracking and proximity-based search functionality.
- Developed push notification workflows for booking updates, provider assignments, and service reminders to boost engagement.
- Consumed third-party payment and mapping SDKs to deliver a seamless end-to-end service booking experience.

Ooba – Home Loan Finance Calculator

- Developed an Android home loan finance calculator app enabling users to estimate repayments, affordability, and loan comparisons.
- Built dynamic calculation engines with real-time input validation, delivering instant and accurate financial projections.
- Designed an intuitive, accessible UI using native Android components to simplify complex financial data for end users.
- Integrated REST APIs to fetch live interest rates and lender data, ensuring calculations reflect current market conditions.
